Androids Dec 09 2020 In 2004, Android was two people who wanted to build camera software. But they couldn't get investors interested. Today, Android is a large team at Google, shipping an operating system (including camera software) to over three billion devices worldwide. This is the inside story, told by the people who made it happen. "What are the essential ingredients that lead a small team to build software at the sheer scale and impact of Android? We may never fully know, but this first person account is probably the closest set of clues we have." -Dave Burke, VP of Android Engineering "Androids captures a strong picture of what the early development of

Android, as well as the Android team, was like.” -Dianne Hackborn, Android Framework Engineer “Androids is the engaging tale of a motley group of coders with a passion to make insanely great products who banged out the operating system when that idea seemed nuts. True to his geek genes, Chet Haase tells this remarkable tale of technical and business success from the trenches, an inspiring, massive collective effort of dozens of programmers who flipped their seemingly late timing to their advantage, and presaged a generation of platform builders. Read Androids to discover what it takes to create a hot tech team that shipped a product running today on more than 3 billion devices.” -Jonathan Littman, co-author of *The Entrepreneurs Faces: How Makers, Visionaries and Outsiders Succeed*, and author of *The Fugitive Game* All profits from the book will be donated to charity.

College Choices Feb 29 2020
Aspiring college students and

their families have many options. A student can attend an in-state or an out-of-state school, a public or private college, a two-year community college program or a four-year university program. Students can attend full-time and have a bachelor of arts degree by the age of twenty-three or mix college and work, progressing toward a degree more slowly. To make matters more complicated, the array of financial aid available is more complex than ever. Students and their families must weigh federal grants, state merit scholarships, college tax credits, and college savings accounts, just to name a few. In *College Choices*, Caroline Hoxby and a distinguished group of economists show how students and their families really make college decisions—how they respond to financial aid options, how peer relationships figure in the decision-making process, and even whether they need mentoring to get through the admissions process. Students of all sorts are

considered—from poor students, who may struggle with applications and whether to continue on to college, to high aptitude students who are offered "free rides" at elite schools. College Choices utilizes the best methods and latest data to analyze the college decision-making process, while explaining how changes in aid and admissions practices inform those decisions as well.

Android Forensics May 02 2020 The open source nature of the platform has not only established a new direction for the industry, but enables a developer or forensic analyst to understand the device at the most fundamental level.

Android Forensics covers an open source mobile device platform based on the Linux 2.6 kernel and managed by the Open Handset Alliance. The Android platform is a major

source of digital forensic investigation and analysis. This book provides a thorough review of the Android platform including supported hardware devices, the structure of the Android development project and implementation of core services (wireless communication, data storage and other low-level functions). Finally, it will focus on teaching readers how to apply actual forensic techniques to recover data. Ability to forensically acquire Android devices using the techniques outlined in the book Detailed information about Android applications needed for forensics investigations Important information about SQLite, a file based structured data storage relevant for both Android and many other platforms.

Casino Sep 25 2019 The true story behind the Martin Scorsese film: A “riveting . . . account of how organized crime looted the casinos they controlled” (Kirkus Reviews). Focusing on Chicago bookie Frank “Lefty” Rosenthal and

his partner, Anthony Spilotro, and drawing on extensive, in-depth interviews, the #1 New York Times–bestselling author of the Mafia classic *Wiseguy*—basis for the film *Goodfellas*—Nicholas Pileggi reveals how the pair worked together to oversee Las Vegas casino operations for the mob. He unearths how Teamster pension funds were used to take control of the Stardust and Tropicana and how Spilotro simultaneously ran a crew of jewel thieves nicknamed the “Hole in the Wall Gang.” For years, these gangsters kept a stranglehold on Sin City’s brightly lit nightspots, skimming millions in cash for their bosses. But the elaborate scheme began to crumble when Rosenthal’s disproportionate ambitions drove him to make mistakes. Spilotro made an error of his own, falling for his partner’s wife, a troubled showgirl named Geri. It would all lead to betrayal, a wide-ranging FBI investigation, multiple convictions, and the end of the Mafia’s longstanding grip on

the multibillion-dollar gaming oasis in the midst of the Nevada desert. *Casino* is a journey into 1970s Las Vegas and a riveting nonfiction account of the world portrayed in the Martin Scorsese film of the same name, starring Robert DeNiro, Joe Pesci, and Sharon Stone. A story of adultery, murder, infighting, and revenge, this “fascinating true-crime Mob history” is a high-stakes page-turner (Booklist).

Hearts of Lions Jan 28 2020
Bike racers were America's media darlings less than a century ago—dashing, eccentric, and very rich daredevils. Until the 1920s bike races drew larger crowds than all other American sports events, including Major League Baseball games. Prize-winning racer and journalist Peter Joffre Nye vividly re-creates this period of sports history, forgotten until now, in Hearts of Lions, a true story of courage, daring, and occasional lunacy. Revised, updated, and expanded, this second edition of Hearts of Lions is based on interviews with more than one thousand cyclists whose racing careers span from 1908 through the 2016 Rio Olympics, along with interviews with trainers and family members. Included are stories about Joseph Magnani, the lone American from southern Illinois who rode on the dusty roads of Europe in road racing's golden era of the 1930s and 1940s; Lance Armstrong, whose rise in the

mid-1990s was eclipsed in the doping era that still casts a long shadow over the sport; Kristin Armstrong, a three-time Olympic gold medalist who set new standards for women in cycling; and Evelyn "Evie" Stevens, who chucked a Wall Street career in her mid-twenties to compete in two Olympics and win several world championship gold medals. Hearts of Lions is a colorful, exciting, classic work on the art of bicycle racing over 140 years against a backdrop of social, political, and technical changes.

Best Technologies for Public Libraries: Policies, Programs, and Services Sep 17 2021

Emerging technologies can intimidate with their cost and uncertainty—this book provides flexible options for adopting the most popular ones.

Introducing new technologies to your library can be a daunting process; they can be costly, they may be unfamiliar to many staff members, and their success is far from assured. To address these concerns, *Best Technologies for Public Libraries* accommodates budgets large and small, providing options for both the ambitious and the cost-conscious. Authors Christopher DeCristofaro, James Hutter, and Nick Tanzi provide a resource for staff looking to incorporate a

number of emerging technologies into their library and makerspaces. But the consensus reality of the digital world is available only if, like his thirteen-year-old granddaughter Miri, you know how to wear your wireless access and to see the digital context—through smart contact lenses. With knowledge comes risk. When Robert begins to re-train at Fairmont High he unwittingly becomes part of a

wide-ranging conspiracy to use technology as a tool for world domination.
